

ProManguezal

Inputs

- Support the development of new methodologies
- Scientific evidence-based management + incorporation of climate-risk management
- Strengthen and valorize indigenous knowledge
- Incentivise partnerships between private and public organizations
- Ensure effective governance between three spheres of government
- Financial resources

Intermediate outcomes

- Improving Community cohesion
- Improving Quality of Mangrove
- Training → dissemination → Awareness
- Improving scientific monitoring
- Climate mitigation

Intermediate outcomes

- Strengthening local unions (e.g.: fishman, crab pickers)
- Improving ecosystem
- Improving water quality and reduced waterborne disease
- Climate Adaptation + exposure to flooding, heat and extreme events
- Greater community participation in mangrove management and conservation

Intermediate outcomes

- Improve microclimate
- Strengthen local economy
- Improve food security
- Improve local medicine
- Decreased exposure to flooding, heat and consequences of erosion
- Carbon storage and improved air quality

Final Outcomes

Direct:
Conservation,
Recovery,
Sustainable Use

Indirect: Integrated
Climate mitigation-
adaptation

Indirect: Improved
health and
wellbeing, and
reduced
socioeconomic
inequality

Unintended Consequences

Different forms of tourism, from beaches → eco-tourism

May not change local behaviours to conserve protected species

Short-term loss of income due to changes in tourism

Changes in vector-borne disease

Personal safety may be altered close to mangroves

Accessibility challenges (healthcare and education)

Assumptions

- Assumes political coordination and political will (three spheres and ministries e.g. Treasury, Federal, State)
- Assumes buy-in and implementation by local government, third sector and private sector
- Assumes it will be possible to fully restore mangroves amidst more severe climate events
- Assumes acceptability of intervention to diverse local populations

Context

- Socio-Cultural
 - Negative connotations of mangroves, and perceived stigma
- Political
 - Discordance of local vs federal election cycles
 - Limitations of 4-year presidential
- Economic
 - Local traditional employment vs. Tourism
 - Federal-State perceived economic growth vs. Environmental consideration
- Environmental
 - Abilities to enforce and regulate

Dissemination Activities

- Mapping of threatened or degraded mangrove areas.
- Educational campaigns focusing on health, climate, and the environment.
- Strengthening local fishing and harvesting associations and co-management agreements with local leaders and environmental agencies.
